AEROMIX AMX - 290 A ADB

Soil loosener and aerator

The AEROMIX is the most technologically advanced implement in loosening and aerating soils in compacted layers of up 20 cm deep.

The operational cost is much less than any other machine with the same function, thanks to the low demand of tractor HP in relation to its working width, providing a grater productivity from the machine and tractor.

The blade axle is assembled in an inclined pattern in relation to the direction of the tractor movement, which allows the blades to penetrate the soil with a light lateral movement, producing the loosening and aeration of the soil.

The perforations from the Aeromix blades are spread throughout the work area with intervals of approximately 20 cm. These perforations and the macroporosity allow penetration of fertilizers and soil additives without provoking mixture among the layers.

The fertilizer and seed distributor is activated by a hydraulic motor.

Model	Number of Blades	Width Work	Depth Cut	Average Yield	Bin Capacity	Weight	Power Minimum
AMX 220A ADB	48	220 cm	20 cm	1.6 ha/h	Fertilizer 630 kg / Seed 150 kg	980 kg	80 hp 4x4
AMX 290A ADB	60	290 cm	20 cm	2.0 ha/h	Fertilizer 850 kg / Seed 190 kg	1120 kg	90 hp 4x4
AMX 340A ADB	76	340 cm	20 cm	2.5 ha/h	Fertilizer 1080 kg / Seed 240 kg	1230 kg	110 hp 4x4
